A cordless burnishing machine is a battery-powered, handheld surface treatment tool used for grinding, deburring, rust removal or high-gloss polishing of materials such as metal, stainless steel, and wood. Compared with traditional wired polishers, the cordless design makes it more flexible and portable, suitable for outdoor construction, places where it is difficult to access electricity, or high-altitude working environments. The device is usually equipped with a brushless motor and multi-speed transmission function, which can provide stable output and efficient energy consumption control, and is compatible with a variety of polishing wheels and grinding heads. It is widely used in metal processing, architectural decoration, automobile repair, and industrial maintenance, and is an important tool for improving work efficiency in modern manufacturing and maintenance operations.
