The global Cordless Hot Air Gun market size is expected to reach \$ 1093 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

A cordless hot air gun is a portable tool that uses a built-in battery to power a machine, without the need for a power cord, to provide high-temperature hot air for welding, shrinking, paint stripping, and other heating operations. It is usually designed to be lightweight and compact, easy to operate, and suitable for a variety of occasions where it is not easy to access electricity, such as outdoor work or repair tasks in a small space. Cordless hot air guns provide flexibility and convenience, and are an important tool for versatile hot air processing. In 2025, global Cordless Hot Air Gun production reached approximately 10,854 k units, with an average global market price of around 70 US\$/Unit. The production capacity of Cordless Hot Air Gun reaches 13,500 k units, and the industry's gross profit margin is approximately between 20% and 40%.

The market demand for cordless hot air guns continues to rise, primarily driven by multiple factors, including increased demands from professional users for operational flexibility and mobility, the trend towards platformization of power tools leading to the widespread adoption of battery-compatible devices, the growth of DIY culture and home repair needs, the inconvenience of power access at construction sites or in outdoor environments spurring the development of wireless solutions, and advancements in lithium battery technology resulting in higher power density and longer battery life. Simultaneously, the increasing prevalence of automotive electronics, small appliance repair, and emergency response scenarios has further expanded the reliance on lightweight, ready-to-use hot air tools, accelerating the evolution of this product category from auxiliary tools to mainstream handheld devices.
