## Abstracts

'A cordless phone is a model of telephone which replaces the coiled wire between the handset and base unit with wireless radio technology. A cordless phone is not the same as a wireless phone, however. The handset must be returned periodically to the base unit for recharging, and the base unit must be physically connected to both a telephone line and an electrical outlet.

Cordless phone usually includes two parts: (a) a fixed part (base station), which is connected to a PSTN line; and (b) one or more portable set (mobile handset unit).'
