Abstracts

A cordless phone is a model of telephone which replaces the coiled wire between the handset and base unit with wireless radio technology. A cordless phone is not the same as a wireless phone, however. The handset must be returned periodically to the base unit for recharging, and the base unit must be physically connected to both a telephone line and an electrical outlet. Cordless phone usually includes two parts: (a) A fixed part (base station), which is connected to a PSTN line; (b) One or more portable set (mobile handset unit).

This report studies the global Cordless Telephone production, demand, key manufacturers, and key regions.
