According to our (Global Info Research) latest study, the global Core Making Equipment market size was valued at US\$ 543 million in 2025 and is forecast to a readjusted size of US\$ 785 million by 2032 with a CAGR of 5.5% during review period.

Core making equipment refers to machinery used in the manufacturing process to create cores for metal casting molds. These cores are essential for shaping internal cavities or hollow sections in cast metal parts. The equipment typically includes various types of machines such as core shooters, which inject a mixture of sand and binder into core boxes to form the core; core sand mixers, which prepare the sand mixture; and core ovens or curing systems, which harden the sand cores to achieve the desired strength. Core making equipment ensures precise and efficient production of complex core shapes required for high-quality castings in industries like automotive, aerospace, and heavy machinery.

From the perspective of product types, cold core process core making machines occupy an important position. Cold core process core making machines are new technologies that have been gradually promoted in recent years. They have good sand shooting effects and high sand shooting efficiency, and will have a large market capacity in the future. It is expected that the market share will gradually increase, replacing some hot core process core making machines on the market. Inorganic process core making machines are difficult to develop and have high equipment costs. The current market capacity is small, but due to their green and environmentally friendly characteristics, they have strong development potential.

At the same time, in terms of application, the automotive industry is the largest

downstream market. Since core making equipment is a large-scale equipment used in sand casting, and more than 40% of sand casting is used in the automotive industry, the automotive industry is also the largest downstream application of core making equipment.

From the perspective of manufacturers, globally, the core manufacturers of core making equipment mainly include Laempe M?ssner Sinto, Loramendi, Suzhou Mingzhi Technology, Omega Sinto, L?ber, Suzhou Suzhu Intelligent Equipment, JML Industrie, Suzhou Sanxin Machinery Manufacturing and Weifang Shenglin Casting Machinery, etc.

The core-making equipment market is moving toward high automation, integrating robots and intelligent systems to improve production accuracy and efficiency while minimizing human errors. This shift is characterized by a shift from stand-alone machines to intelligent systems that can automate the entire process, supported by modern technologies such as 5G and big data. In addition, manufacturers are also focusing on energy conservation and emission reduction and sustainable practices, while pursuing higher quality sand cores by optimizing processes.
