## Abstracts

The global Core Material Soft Ferrite market size is expected to reach \$ 10547 million by 2032, rising at a market growth of 7.4% CAGR during the forecast period (2026-2032).

In 2025, global Core Material Soft Ferrite production reached approximately 1.48 million tons, with an average global market price of around US\$4,200 per ton.

The gross profit margin of major companies in the industry is between 20%-35%.

In 2025, the global production capacity of core material soft ferrite was approximately 1.97 million tons.

Soft ferrite core materials are ceramic magnetic materials primarily composed of iron oxide combined with other metal oxides such as manganese, zinc, or nickel. These materials are widely used to manufacture magnetic cores in transformers, inductors, and electromagnetic interference suppression components. Soft ferrites exhibit high magnetic permeability, low eddy current losses, and good performance at high frequencies, making them suitable for power electronics and communication equipment. They are essential components in switching power supplies, consumer electronics, electric vehicles, and renewable energy systems where efficient magnetic energy conversion is required.

The industrial chain includes upstream iron oxide, manganese oxide, zinc oxide, and other raw materials used for ferrite powder preparation. Midstream processes involve powder mixing, calcination, pressing, sintering, and precision machining to produce ferrite cores of various shapes. Downstream applications include power electronics

manufacturers, transformer producers, telecommunications equipment suppliers, and automotive electronics systems. Supporting services include magnetic testing, component integration, and technical support.

The soft ferrite core material market is supported by rapid growth in power electronics and high-frequency energy conversion technologies. Increasing adoption of electric vehicles, renewable energy systems, and consumer electronics is driving demand for efficient magnetic components. As switching power supplies and high-frequency converters become more common, ferrite materials with lower losses and improved thermal stability are increasingly required. Technological development focuses on improving magnetic performance, reducing core losses, and enhancing manufacturing consistency. However, raw material price fluctuations and competition from alternative magnetic materials may influence market dynamics. Overall, continued expansion of electronics and electrification industries is expected to sustain steady demand for soft ferrite core materials.
