Scope of the Report:

This report focuses on the Core Materials in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The global core materials market for composites is segmented on the basis of type, end-use industry, and region. Based on type, the core materials market for composites has been further segmented into foam, honeycomb, and balsa. Foam is expected to be the fastest-growing type segment of the core materials market for composites. Foam core imparts strength and stiffness while keeping the composite structure lightweight. Rapid growth in the wind energy industry, wind turbine blade manufacturing, and emergence of China and other Asian countries as major wind energy producers are factors fueling the consumption of foam core, thereby driving the core materials market for composites at a significant pace.

Major end-use industries in the core materials market for composites are aerospace, wind energy, marine, transportation, construction, and others. The wind energy segment is projected to grow at the highest rate between 2017 and 2022. This can be attributed to the use of composites in designing of blades for large wind turbines. These blades are made by combining core materials and glass reinforced polyester/epoxy. The renewal of Production Tax Credit (PTC) in the U.S. has helped the wind energy market to grow, thereby driving the core materials market for composites. The wind energy segment is estimated to grow due to the rising demand for clean energy across the globe.

The worldwide market for Core Materials is expected to grow at a CAGR of roughly 8.8% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
