## Abstracts

The global Core Router market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A core router is a router designed to operate in the Internet backbone, or core. To fulfill this role, a router must be able to support multiple telecommunications interfaces of the highest speed in use in the core Internet and must be able to forward IP packets at full speed on all of them. It must also support the routing protocols being used in the core. A core router is distinct from an edge router: edge routers sit at the edge of a backbone network and connect to core routers.

This report studies the global Core Router production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Core Router, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
