Abstracts

According to our (Global Info Research) latest study, the global Coreless Axial Flux Electric Motors market size was valued at US\$ 284 million in 2025 and is forecast to a readjusted size of US\$ 589 million by 2032 with a CAGR of 11.3% during review period.

A coreless axial flux electric motor is a high-performance motor that employs an axial flux topology and has a stator without an iron core. Unlike traditional radial flux motors where flux flows radially, the flux in a coreless axial flux motor is transmitted axially. It typically consists of a dual-rotor, single-stator or single-rotor, dual-stator structure. Permanent magnets are mounted on the rotor discs, while the stator uses a coreless winding structure, eliminating the need for a traditional silicon steel core.

In 2025, global sales of coreless axial flux electric motors reached 23,000 units, with a production capacity of approximately 33,000 units. The average selling price was US\$12,000 per unit, and the average gross profit margin was 35%-45%.

The upstream of the industry chain mainly includes suppliers of high-performance rare earth permanent magnet materials (neodymium iron boron, samarium cobalt, etc.), copper winding materials, carbon fiber and aluminum alloy structural parts, bearings, sensors, encoders, and power electronic devices such as IGBTs and SiC power modules; the midstream consists of R&D and manufacturing enterprises of coreless axial flux motors and electric drive systems, responsible for electromagnetic design, coreless winding manufacturing, rotor magnetic circuit optimization, thermal management system development and controller integration, and forming complete motor drive solutions; the downstream is mainly used in low-altitude economy, engineering machinery, new energy vehicles, new energy ships, aerospace and other

fields.

Global carbon neutrality goals, policies promoting new energy vehicles, and aviation electrification strategies have provided significant development opportunities for the coreless axial flux electric motor industry. Countries are actively supporting the research and development of new energy vehicles and advanced aircraft, driving innovation in high-efficiency, high-power-density electric drive technologies. Simultaneously, the establishment of eVTOL certification systems, Urban Air Mobility (UAM) planning, and the upgrading of energy efficiency standards for high-efficiency motors have also accelerated the commercialization of axial flux motor technologies. In recent years, an increasing number of automakers and aerospace companies have begun collaborating with axial flux motor manufacturers to jointly advance the development of next-generation electric drive systems.
