## Abstracts

The global Coreless Winder market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Coreless winders find applications in various industries, including wire and cable manufacturing, textile and yarn production, packaging, film and tape winding, and many other industries that require efficient and compact winding solutions.

A coreless winder is a device used for winding various materials, such as wire, cable, yarn, or tape, without the need for a central core or spool. Unlike traditional winding methods that require a core or spool, coreless winders directly wind the material onto itself, creating a compact and self-contained package.

This report studies the global Coreless Winder production, demand, key manufacturers, and key regions.
