The global Cork Stoppers market size is expected to reach \$ million by 2032, rising at a market growth of %CAGR during the forecast period (2026-2032).

Cork stopper is a stopper made of cork. Cork is an impermeable buoyant material, a prime-subset of bark tissue that is harvested for commercial use primarily from *Quercus suber* (the Cork Oak), which is endemic to southwest Europe and northwest Africa. Cork is composed of suberin, a hydrophobic substance and, because of its impermeable, buoyant, elastic, and fire retardant properties, it is used in a variety of products, the most common of which is wine stoppers. The montado landscape of Portugal produces approximately half of cork harvested annually worldwide, with Corticeira Amorim being the leading company in the industry. Cork was examined microscopically by Robert Hooke, which led to his discovery and naming of the cell, especially a bottle stopper.

In United States, Cork Stoppers key players include Nomacor, Cork Supply, Amorim, MaSilva, Lafitte, etc. Global top five manufacturers hold a share over 65%.

Western Part is the largest market, with a share about 35%, followed by Eastern Part, and Central Part, both have a share over 45 percent.

In terms of product, Natural Cork Stopper is the largest segment, with a share over 60%. And in terms of application, the largest application is Wine, followed by Crafts, Special bottled liquid.
