According to our (Global Info Research) latest study, the global Corneal Pachymetry market size was valued at USD 301430 million in 2023 and is forecast to a readjusted size of USD 341950 million by 2030 with a CAGR of 1.8% during review period.

Corneal Pachymetry, the technique of measuring corneal thickness, is a quick and painless test involving an ultrasound scan of the front and back corneal surfaces to obtain a corneal thickness reading. As the intra-ocular pressures measured during tonometry are dependent upon the thickness of the cornea, Pachymetry provides invaluable information in the management of suspect glaucoma patients. For example, a thicker cornea may mean less reason to worry about Glaucoma as patients' thicker corneas may show a higher pressure reading than actually exists.

Global Corneal Pachymetry key players include OCULUS, NIDEK, Tomey, Reichert, etc. Global top four manufacturers hold a share over 30%.

North America is the largest market, with a share over 30%, followed by Europe, and Japan, both have a share over 40 percent.

In terms of product, Handheld Type is the largest segment, with a share about 65%. And in terms of application, the largest application is Refractive Surgery, followed by Glaucoma Diagnosis.
