A Corona Discharge Ozone System is a type of ozone generator that uses an electrical discharge to produce ozone gas. It operates on the principle of corona discharge, which involves creating a high voltage electrical field between two electrodes separated by a dielectric material.

Corona Discharge Ozone Systems are commonly used for ozone production in water and air treatment processes. They can be used for disinfection and sterilization purposes in industries such as water treatment, wastewater treatment, swimming pool sanitation, food processing, and air purification. It is important to properly size and regulate corona discharge ozone generators to ensure the desired ozone concentration and efficiency. Safety precautions should be followed when operating these generators, as they can produce high voltages and release ozone gas, which can be harmful in high concentrations. Regular maintenance and cleaning of corona discharge ozone generators are necessary to ensure optimal performance and prevent the buildup of contaminants on the electrodes, which can affect ozone production and efficiency.
