According to our (Global Info Research) latest study, the global Corona Surface Treatment Equipment market size was valued at US\$ 154 million in 2025 and is forecast to a readjusted size of US\$ 204 million by 2032 with a CAGR of 4.1% during review period.

Corona Surface Treatment Equipment is an industrial system designed to modify the surface properties of materials using high-voltage, high-frequency electrical discharge (known as corona discharge). The equipment functions by generating a low-temperature plasma field between an electrode and a grounded roller. As the substrate (such as plastic films, foils, or paper) passes through this discharge, the reactive species—primarily ozone and ions—bombard the surface, breaking molecular chains and creating polar oxidation sites. This process significantly increases the material's surface energy and wettability, ensuring optimal adhesion for inks, coatings, adhesives, and laminates. In 2025, global Corona Surface Treatment Equipment production reached approximately 50000 units and average price was 3000 usd.
