According to our (Global Info Research) latest study, the global Coronary Plaque Rotational Atherectomy market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Coronary Plaque Rotational Atherectomy is a minimally invasive interventional procedure designed to treat calcified or hardened plaques in the coronary arteries. When plaque causes stenosis and restricts blood flow, traditional balloon angioplasty or stent placement may not be effective. Using a high-speed, diamond-coated burr, this procedure grinds the plaque into tiny particles, which are carried away by the bloodstream, thereby restoring proper blood flow in the coronary artery.
