Abstracts

The global Corporate Debt Solutions market size is expected to reach \$ 22932 million by 2032, rising at a market growth of 5.4% CAGR during the forecast period (2026-2032).

Corporate Debt Solutions refers to comprehensive full-cycle debt management services provided by third-party service providers such as investment banks, financial advisors, asset management firms, accounting firms, and distressed asset institutions to various types of enterprises. These services cover the entire chain of solutions, including financing optimization and capital structure adjustment for normal operating enterprises, as well as debt restructuring, creditor negotiation, non-performing loan disposal, bankruptcy reorganization, and cash flow restoration for distressed enterprises. The core objectives are to reduce financing costs, optimize debt maturity, mitigate liquidity risks, and balance the interests of creditors and debtors. These services include diverse forms such as financing underwriting, debt refinancing, debt consolidation, restructuring negotiations, credit risk control, asset disposal, and ESG debt instrument design.

Debt restructuring involves modifying the terms and conditions of a corporation's existing debt to improve its financial position and repayment capabilities. This may include extending the repayment period, reducing interest rates, or changing the debt's structure. Debt refinancing involves replacing existing debt with new debt at more favorable terms, such as lower interest rates or longer repayment periods. This can help companies reduce their debt service costs and improve cash flow. Debt consolidation combines multiple debts into a single, manageable payment, often with better terms, to simplify a company's debt obligations and reduce financial strain.
