Abstracts

The global Corporate Mergers and Acquisitions Financing Consulting market size is expected to reach \$ 3280 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

Corporate Mergers and Acquisitions Financing Consulting is a comprehensive, professional intellectual support service provided by investment banks, securities firms, financial advisory firms, and management consulting firms for corporate M&A transactions. Its core objective is to help clients maximize the strategic value of M&A transactions while effectively controlling transaction risks and costs. Services cover the entire M&A cycle: the early stage includes strategic fit analysis, target identification and screening, and preliminary transaction structure design; the mid-stage covers financial and legal due diligence, target company valuation, transaction terms negotiation, and financing plan development; and the later stage involves post-merger integration planning and execution support. The advisory team leverages its industry knowledge, financial expertise, legal compliance experience, and extensive database network to act as a key navigator in complex and information-asymmetric transactions, ensuring that the transaction is commercially sound, procedurally compliant, and operationally feasible, ultimately helping companies achieve leapfrog development through external expansion.

The market prospects for Corporate Mergers and Acquisitions Financing Consulting remain positive, and its development is closely related to the global economic landscape, industrial restructuring, and corporate strategic upgrades. Against the backdrop of China's economic shift from high-speed growth to high-quality development, increased industrial concentration, technological innovation-driven

growth, and the deepening of the 'dual circulation' strategy, both the integration and optimization of traditional industries and cross-industry mergers and acquisitions in emerging industries will generate a large number of increasingly complex transaction demands. Meanwhile, policies such as the registration-based IPO system reform and state-owned enterprise reform have also injected vitality into the market. In the future, this service will place greater emphasis on industry depth, operational refinement, and technological empowerment. On the one hand, consultants will need to have in-depth expertise in specific industries to provide more insightful strategic advice; on the other hand, big data, AI, and other technologies will be more widely applied in target screening, valuation modeling, and risk warning. Furthermore, with the increasing importance of ESG principles and national security reviews, the demand for related professional consulting will grow rapidly, ensuring the market's continued vitality and ample room for upgrading.
