Abstracts

According to our (Global Info Research) latest study, the global Corrosion Coupons market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

With repair and maintenance constantly increasing due to corrosion, there has been growing demand for corrosion coupons that can easily measure the corrosivity of a system. Corrosion coupons accurately determine the corrosion of metals under various service conditions. When the corrosion coupon is exposed to environment/other service conditions, weight loss analysis is done to determine mils per year (MPY) corrosion rates. Corrosion monitoring is critical with respect to maintenance and repair costs and material failure. By evaluating the mils per year, the corrosion rate and the life expectancy of the material can be determined. The corrosion coupon is made of the same material, alloy or similar chemical configuration. Corrosion coupons provide an indication of the corrosion status and the type of deposits existing in the pipeline or system. Corrosion coupons are a popular method of internal corrosion monitoring.

There has been increasing demand from end users to extend the life of existing pipeline structures and to run them at higher capacity. High corrosion rate has led to failure of many systems. Thus, the need for corrosion coupons for corrosion monitoring is higher than ever.
