Oilfield reinjection water corrosion inhibitors are a class of chemicals that are specifically used to prevent metal pipes and equipment in oilfield reinjection water systems from being damaged by corrosion. Oilfield reinjection water refers to the process of reinjecting treated water into the formation in order to maintain formation pressure and increase recovery during oilfield development. Since corrosive substances such as dissolved oxygen, carbon dioxide, and hydrogen sulfide in reinjection water can easily lead to corrosion of metal pipes and equipment, corrosion inhibitors are needed to protect these equipment.
