## Abstracts

According to our (Global Info Research) latest study, the global Corrosion-resistant Alloy Pipes market size was valued at US\$ 22473 million in 2025 and is forecast to a readjusted size of US\$ 36216 million by 2032 with a CAGR of 7.0% during review period.

In 2025, global sales of corrosion-resistant alloy pipes reached 4.2 million tons, with an average selling price of US\$5,200 per ton. Corrosion-resistant alloy pipes are industrial pipes made primarily of nickel-based alloys, stainless steel alloys, titanium alloys, and high-alloy steels. They are mainly used for long-term stable transportation and structural support in high-temperature, high-pressure, and highly corrosive environments. Upstream raw materials include nickel, chromium, molybdenum, titanium, ferroalloys, and refined alloy billets. On average, nickel consumption is approximately 8%-18%, chromium approximately 15%-25%, and molybdenum approximately 2%-6% per ton of pipe. Midstream production is completed by smelting, hot extrusion, cold rolling, and finishing enterprises. Downstream supply mainly goes to the oil and gas, chemical, marine engineering, power, nuclear power, and new energy equipment sectors. Oil and gas and chemical consumption account for approximately 48%, power and nuclear energy approximately 22%, and marine engineering and other high-end manufacturing approximately 30%. Global total capacity is approximately 5.6 million tons per year, with an overall capacity utilization rate of approximately 75% and an average gross profit margin of approximately 30%-38%. The future lies in deep-sea oil and gas development, large-scale upgrading of chemical plants, expansion of hydrogen energy and nuclear power projects, and accelerated domestic substitution of high-end equipment. Corrosion-resistant alloy pipes will continue to benefit from improved safety standards and increased demand for high-end materials, offering stable expansion and

high-value-added business opportunities.
