According to our (Global Info Research) latest study, the global Corrosion Resistant Bronze Powder market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Corrosion-resistant bronze powder refers to powder made of various types of bronze or brass alloys, mainly used in lacquer or glazing medium, or together with copper powder paste (BRONING LIQOID) to form so-called imitation gold powder pigments. This powder can be used to replicate every shade of gold from light blonde, lemon to dark copper tones, sometimes with some dye added to the paint mix as well. Bronze powder will darken or fade in a short time. Bronze powders are rarely used in fine art because of their lack of permanence, and because the lacquers they make are dull and poorly grained.
