## Abstracts

The global Corrosion Resistant Coated Fasteners market size is expected to reach \$ 15376 million by 2032, rising at a market growth of 5.7% CAGR during the forecast period (2026-2032).

Corrosion resistant coated fasteners refer to mechanical connecting components including bolts, screws, nuts, washers, studs, and rivets manufactured from carbon steel, alloy steel, or stainless steel substrates, that achieve enhanced durability against corrosive environments through the application of one or more protective coating layers on their surfaces. These fasteners are designed to maintain structural integrity, mechanical strength, torque-tension consistency, and aesthetic appearance when exposed to challenging conditions such as high humidity, salt spray, acidic or alkaline chemicals, extreme temperatures, and marine or industrial atmospheres. In 2025, global production reached approximately 2,410K ton, with an average global market price of around USD 4,200 per ton. A factory gross profit of USD 1,176 per ton with 28% gross margin. A single line full machine capacity production is around 10K ton per line per year. The upstream is dependency in raw material, chemical and industrial inputs, energy and equipment. The downstream demand is concentrated in construction, automotive and energy. Corrosion-resistant bolts and nuts are used to secure turbine blades and tower segments exposed to salt spray and high humidity for 20–25 years lifespan. Inida leads driven by a strong domestic demand (auto/infra) and increasing manufacturing base. While China is largest producer. Domestic NEV boom driving demand.
