## Abstracts

The global Corrosion-resistant Locks market size is expected to reach \$ 3491 million by 2032, rising at a market growth of 6.6% CAGR during the forecast period (2026-2032). In 2025, global sales of corrosion-resistant locks reached 120 million units, with an average selling price of \$18 per unit. Corrosion-resistant locks are safety locking devices made of stainless steel, zinc alloy, or engineering plastics as the base material, and improved through processes such as plating, spraying, or passivation to enhance their resistance to salt spray, acids and alkalis, and weathering. They are widely used in marine engineering equipment, petrochemicals, transportation facilities, outdoor construction, and public infrastructure. Upstream raw materials mainly consist of stainless steel strip and bars, zinc ingots, engineering plastic particles, and surface treatment chemicals. The material consumption structure is approximately 60% stainless steel, 20% zinc alloy, 10% engineering plastics, and 10% coating materials. Downstream... Lock manufacturers supply marine engineering equipment manufacturers, chemical plant integrators, rail transit and construction contractors, with a global total capacity of approximately 150 million locks per year. The industry's average gross profit margin is about 28%. Downstream consumption is comprised of approximately 30% for marine engineering and shipbuilding, 25% for petrochemicals, 20% for transportation facilities, 15% for outdoor and municipal applications, and 10% for other applications. With the development of the marine economy, the upgrading of chemical safety, and the increasing demand for durability in outdoor facilities, products will evolve towards high-grade corrosion-resistant materials, lightweight designs, and intelligent lock controls. Coupled with the continuous demand brought about by infrastructure construction in emerging markets and the replacement of existing facilities, corrosion-resistant locks are creating stable business opportunities in high-end applications and domestic substitution.

The corrosion-resistant lock market has received widespread attention in recent years,

particularly due to growing demand in highly corrosive environments such as marine engineering, petrochemicals, transportation facilities, and outdoor construction. With the advancement of global infrastructure construction, especially in coastal and humid environments, the demand for corrosion-resistant locks is increasing year by year. Applications such as marine engineering equipment, port facilities, oil platforms, and chemical plants place extremely high demands on the corrosion resistance and durability of locks.

Furthermore, the increasing global awareness of environmental protection has led to higher requirements for anti-corrosion materials, driving technological innovation in corrosion-resistant locks. Current market trends include the application of high-performance stainless steel and highly corrosion-resistant alloys, and innovations in coating technologies such as galvanizing, spraying, and passivation, significantly extending the service life of locks in harsh environments.

In terms of market competition, while some large lock manufacturers hold a significant market share, small and medium-sized enterprises and innovative technology providers are gradually gaining market share as more regions invest in infrastructure and the demand for anti-corrosion technologies continues to grow. It is expected that with technological advancements and the diversification of industry demands, corrosion-resistant locks will maintain strong growth momentum in the coming years.
