## Abstracts

According to our (Global Info Research) latest study, the global Corrosion-Resistant Resin market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

High performance, corrosion-resistant specialty polyester and vinyl ester resin systems are ideal for the manufacture of tanks, pipes, vessels that contain acids, alkalis, fuels, foodstuffs, water and other materials that can corrode metals. These resins are used where long-term resistance to chemical attack is essential or where operating at elevated temperatures. Corrosion Resistant resins are primarily formulated as isophthalic, terephthalic and vinyl ester resins, but other specialty base resins are also used. Vinyl ester resins are used extensively in boat building to prevent hull blistering.

Specific corrosion resin formulations are produced to meet a variety of specifications and standards that have been established over time in conjunction with extensive long-term testing. The critical nature of many corrosion applications includes; underground storage tanks, tanks for corrosive chemicals, industrial scrubbers, pressure transfer pipe, and effluent management. Because of this high manufacturing standards and adherence to established manufacturing processes are required. In the marketplace, corrosion resistant composites parts successfully compete with steel and aluminum because of inherent longevity, ease of installation and the ability to easily repair compared to metals.
