Abstracts

The global Corrugated Boxes Die Cutting Machine market size is expected to reach \$ 7662 million by 2032, rising at a market growth of 6.9% CAGR during the forecast period (2026-2032).

In 2025, global sales of Corrugated Boxes Die Cutting Machines reached 62,000 units, with an average selling price of \$75,000 per unit. The Corrugated Boxes Die Cutting Machine is a critical piece of equipment used for processing and shaping corrugated cardboard; utilizing a die-cutting plate, it applies specific pressure and speed to perform cutting, slotting, creasing, and forming operations on the cardboard, thereby achieving precise structural processing for cartons. Widely utilized in the packaging and printing industry, it stands as one of the core components within a corrugated box production line. Based on structural design, these machines can be categorized into flatbed die-cutting machines, rotary die-cutting machines, and fully automated integrated die-cutting production lines; they are characterized by high efficiency, superior forming precision, and the capacity to accommodate orders of various specifications. Upstream raw materials primarily consist of structural steel, servo motors, transmission systems, hydraulic systems, control systems, and die-cutting molds; downstream markets primarily target corrugated carton manufacturers, packaging enterprises, and processing firms supporting e-commerce logistics. In 2025, the total global production capacity stood at approximately 75,000 units, with the industry's average gross profit margin hovering around 25%. Upstream material consumption is dominated by steel, motors, and control systems. Looking ahead, driven by the continued expansion of the e-commerce and express delivery sectors along with rising demand for personalized packaging, die-cutting equipment is poised to evolve toward higher speeds, greater automation, and digitalization. Concurrently, flexible manufacturing capabilities and the ability to respond rapidly to short-run orders are emerging as key competitive

differentiators; the industry therefore possesses substantial potential for stable growth, as well as significant market space for equipment replacement and upgrades.
