According to our (Global Info Research) latest study, the global Corrugated Tubing Slitting Cutting Machine market size was valued at US\$ 67.06 million in 2025 and is forecast to a readjusted size of US\$ 97 million by 2032 with a CAGR of 5.3% during review period.

In 2025, global Corrugated Tubing Slitting Cutting Machine production reached approximately 6,650 units, with an average global market price of around 9,800 US\$/unit.

Corrugated Tubing Slitting Cutting Machine is an automatic or semi-automatic processing machine used to cut corrugated tubing, convoluted tubing, wire loom tubing or flexible plastic conduit to a preset length and, when required, slit the tube longitudinally for easier cable insertion. It is mainly used in wire harness manufacturing, automotive wiring, electrical equipment assembly, rail transit, aerospace wiring and industrial control systems, helping improve cutting accuracy, slit consistency, production speed and labor efficiency compared with manual cutting.

The average single-line production capacity of Corrugated Tubing Slitting Cutting Machine is 48 units, the average gross profit margin was 34.3%.

The upstream includes servo motors, PLC/control systems, blades, feeding rollers, sensors, pneumatic components, frames, guide rails and electrical parts. The midstream is machine manufacturers that design, assemble, test and customize cutting, feeding, slitting and length-control systems according to tube diameter, material and production speed. The downstream includes automotive wire harness plants, new

energy vehicle harness factories, appliance wiring manufacturers, rail transit equipment suppliers, aerospace cable assembly companies and industrial electrical cabinet producers.

The cost is mainly composed of mechanical parts and frame components, accounting for about 25%?30%; control systems, servo motors, sensors and electrical components account for around 25%?35%; cutting/slitting blades, feeding mechanisms and fixtures account for about 10%?15%; labor, assembly and debugging account for around 10%?15%; R&D, software, customization and testing account for about 8%?12%; packaging, logistics and after-sales service account for around 5%?8%. Higher-end models usually have a larger share of servo control, visual/sensor detection and customized automation modules.

Demand is driven by the rapid growth of automotive wire harnesses, EV high-voltage harnesses, industrial automation, rail transit and electrical equipment manufacturing, where corrugated tubing must be cut accurately and sometimes slit for cable protection assembly. Business opportunities mainly come from replacing manual processing, improving harness production efficiency, reducing cutting errors, and integrating the machine into automated wire harness production lines. Suppliers with stable cutting accuracy, wide tube diameter coverage, easy blade adjustment, customized slitting capability and strong after-sales service are more competitive.
