The global Corundum Brick market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Corundum Brick is a durable and abrasion-resistant material made from synthetic corundum, typically used in industrial settings for applications such as grinding, polishing, and cutting due to its high hardness and strength. It is produced by shaping and firing synthetic corundum powder, which is an artificial form of aluminum oxide (Al<sub>2</sub>O<sub>3</sub>) enhanced with various elements to increase its hardness and improve its properties for specific uses. These bricks are widely used in the manufacturing of Abrasives, Refractory products, and as an important component in grinding wheels, sandpapers, and other abrasive tools.
