Abstracts

Corundum mullite brick refers to a high alumina refractory product composed of corundum and mullite main crystal phase. Corundum-mullite bricks refer to refractory products made of high-purity or relatively pure raw materials. The presence of low-melting-point oxide impurities will reduce its high-temperature performance. Use pure mullite raw materials synthesized from industrial alumina powder and pure clay, bauxite or silica, especially the content of alkali metal oxides should be as low as possible.
