Corundum-mullite sagger is a high-temperature refractory product made of two refractory materials, corundum and mullite. It is particularly suitable for harsh conditions such as high temperature resistance, corrosion resistance, and impact resistance in metal smelting and other high-temperature reaction processes. Corundum has excellent high-temperature strength and thermal shock resistance, while mullite provides good thermal stability and chemical corrosion resistance. By combining these two materials, the corundum-mullite sagger has high-temperature corrosion resistance, strength and long-term durability. It can withstand high-temperature smelting, reduction and acid gas erosion. It is widely used as a smelting and heating container in aluminum smelting, steel smelting, chemical reactors and other high-temperature industrial processes.
