Abstracts

According to our (Global Info Research) latest study, the global Cosmetic Grade Caprylic/Capric Triglyceride market size was valued at US\$ 504 million in 2025 and is forecast to a readjusted size of US\$ 759 million by 2032 with a CAGR of 6.0% during review period.

Caprylic/Capric Triglycerides are a cosmetic ingredient that can be used as rheological modifiers to improve the viscosity of products by increasing their viscosity. Due to its oily nature, this substance is beneficial for the application of cosmetics, giving them better smoothness. Caprylic/Capric Triglycerides are an oily moisturizer that can form a protective occlusive layer (membrane) on the surface of the skin and hair. This layer can prevent excessive evaporation of moisture. This substance can regulate the skin, making it soft and smooth, and also improve the structure of hair, making it soft and smooth. The pure product will promote the formation of blackheads (pimples), so it is best to use it in cosmetic formulas. In 2025, global Cosmetic Grade Caprylic/Capric Triglyceride production reached approximately 169.29 K MT, with an average global market price of around US\$ 2,895 per MT.

The annual production capacity of cosmetic grade caprylic/caprylic triglycerides (GTCC) is 260 thousand tons, with a gross profit margin of about 25%.

The upstream mainly comes from the oil and basic chemical system, with key raw materials including octanoic and decanoic acid fatty acid fractions obtained from coconut oil or palm kernel oil fractionation, as well as glycerol. Auxiliary materials include esterification catalysts and neutralizers, antioxidants or stabilizers, filtration media and deodorization adsorption materials. Public works include steam, electricity,

cooling water and vacuum systems, and packaging is mostly in barrels or ton barrels with storage and transportation requirements.

The downstream mainly focuses on cosmetics and personal care, typically entering lotion face cream, sunscreen, base makeup, makeup removal and cleaning, hair care essential oil and fragrance carrier and other formulations, which are mainly used as solvent carriers of fat soluble ingredients such as light skin base oil, essence and sunscreen, to improve the spread and touch, reduce the sticky feeling of the formula and improve the stability of the formula.

Raw materials account for 65% to 82% of the total cost, energy and utilities account for about 6% to 12%, catalyst additives and filtration and deodorization materials account for about 1% to 4%, labor and manufacturing costs account for about 4% to 8%, depreciation and maintenance account for about 4% to 10%, and packaging, warehousing, logistics, and quality inspection and release account for about 5% to 12%.
