Abstracts

According to our (Global Info Research) latest study, the global Cosmetic Grade MCT Oil market size was valued at US\$ 504 million in 2025 and is forecast to a readjusted size of US\$ 759 million by 2032 with a CAGR of 6.0% during review period.

Cosmetic grade MCT oil usually refers to the medium chain triglyceride oil obtained from coconut oil or palm kernel oil by hydrolysis and fractionation and esterification or re esterification with glycerol. It is mainly composed of caprylic triglyceride, caprylic triglyceride and their mixtures. Its appearance is mostly colorless to yellowish transparent oily liquid, with mild or almost tasteless smell, low viscosity, good spread, high oxidation stability, and good solubility and dispersion ability for most fat soluble components. Cosmetic grade means that it is more strict in sensory and safety indicators, such as lower acid value and peroxide value, lower color and odor, and lower Free fatty acid and impurity residues, which usually meet the requirements of cosmetic raw material specifications and quality system, are often used as lotion face cream, sunscreen, makeup, makeup removal and cleaning The base oil and solvent carrier in hair care essential oils and other formulas are used to improve skin texture, enhance extensibility and stability, and reduce formula greasiness. In 2025, global Cosmetic Grade MCT Oil production reached approximately 169.29 K MT, with an average global market price of around US\$ 2,895 per MT.

The annual production capacity of cosmetic grade Cosmetic Grade MCT Oil is 260 K MT, with a gross profit margin of about 25%.

The upstream mainly comes from the oil and basic chemical system, with key raw materials including octanoic and decanoic acid fatty acid fractions obtained from

coconut oil or palm kernel oil fractionation, as well as glycerol. Auxiliary materials include esterification catalysts and neutralizers, antioxidants or stabilizers, filtration media and deodorization adsorption materials. Public works include steam, electricity, cooling water and vacuum systems, and packaging is mostly in barrels or ton barrels with storage and transportation requirements.

The downstream mainly focuses on cosmetics and personal care, typically entering lotion face cream, sunscreen, base makeup, makeup removal and cleaning, hair care essential oil and fragrance carrier and other formulations, which are mainly used as solvent carriers of fat soluble ingredients such as light skin base oil, essence and sunscreen, to improve the spread and touch, reduce the sticky feeling of the formula and improve the stability of the formula.

Raw materials account for 65% to 82% of the total cost, energy and utilities account for about 6% to 12%, catalyst additives and filtration and deodorization materials account for about 1% to 4%, labor and manufacturing costs account for about 4% to 8%, depreciation and maintenance account for about 4% to 10%, and packaging, warehousing, logistics, and quality inspection and release account for about 5% to 12%.
