According to our (Global Info Research) latest study, the global Cosmetic Grade PEG-30 Lanolin market size was valued at US\$ 37.04 million in 2025 and is forecast to a readjusted size of US\$ 48.98 million by 2032 with a CAGR of 4.1% during review period.

Cosmetic-grade PEG-30 lanolin is a nonionic surfactant synthesized from natural lanolin and ethylene oxide. It combines excellent moisturizing properties with water solubility (or emulsifying properties), acting as a moisturizer, emulsifier, solubilizer, and skin softener, improving the skin feel of products and leaving skin soft and non-greasy.

The upstream core raw materials are anhydrous lanolin and ethylene oxide. Lanolin extraction and refining mainly originate from the washing byproducts of sheep wool, undergoing decolorization, deodorization, and other refining processes to become raw material-grade lanolin. The midstream is the core manufacturing stage, where refined lanolin is ethoxylated with 30 moles of ethylene oxide under a catalyst to produce PEG-30 lanolin. Downstream applications include skincare, haircare, and cleaning products.

Global sales in 2025 were approximately 5,000 tons, with an average selling price of US\$7,205 per ton. The industry's gross profit margin is around 25%-30%.
