## Abstracts

According to our (Global Info Research) latest study, the global Cosmetic Grade Polyglutamic Acid market size was valued at USD 93 million in 2022 and is forecast to a readjusted size of USD 120.5 million by 2029 with a CAGR of 3.8% during review period.

The development trend of cosmetic grade polyglutamic acid is expected to be positive in the coming years. Polyglutamic acid (PGA) is a naturally occurring biopolymer that has gained attention in the cosmetic industry due to its moisturizing and anti-aging properties. One of the key trends in the development of cosmetic grade PGA is the increasing demand for natural and sustainable ingredients in skincare products. PGA is derived from fermented soybeans and is biodegradable, making it an attractive option for consumers who are conscious of the environmental impact of their beauty products. Another trend is the growing focus on hydration and moisture retention in skincare. PGA has the ability to hold up to 5000 times its weight in water, making it an excellent moisturizing agent. As consumers become more aware of the importance of hydration for healthy skin, the demand for PGA-based products is expected to rise. Furthermore, the anti-aging properties of PGA are driving its development in the cosmetic industry. PGA has been found to stimulate collagen production and improve skin elasticity, making it an effective ingredient in anti-aging skincare products. As the global population ages and the demand for anti-aging solutions increases, the market for PGA-based products is likely to expand.
