Abstracts

Trehalose is a kind of the natural sugars, present in many desert plants, formed in the layer of a glassy matrix, to protect its internal structure until the rain came. Trehalose is a nonreducing sugar formed from two glucose units joined by a 1-1 alpha bond. The bonding makes trehalose very resistant to acid hydrolysis, and therefore is stable in solution at high temperatures, even under acidic conditions. The bonding keeps nonreducing sugars in closed-ring form, such that the aldehyde or ketone end groups do not bind to the lysine or arginine residues of proteins.

According to our (Global Info Research) latest study, the global Cosmetic Grade Trehalose market size was valued at US\$ 29.3 million in 2023 and is forecast to a readjusted size of USD 45 million by 2030 with a CAGR of 6.3% during review period.
