Abstracts

The global Cosmetic Grade UV Filter market size is expected to reach \$ 794.3 million by 2029, rising at a market growth of 5.1% CAGR during the forecast period (2023-2029).

The development trend for cosmetic grade UV filters is focused on creating more effective and safer options for sun protection. UV filters that provide protection against both UVA and UVB rays are becoming increasingly popular. Consumers are becoming more aware of the harmful effects of both types of rays and are seeking products that offer comprehensive protection. UV filters that are photostable, meaning they do not degrade or lose effectiveness when exposed to sunlight, are in high demand. This ensures that the product remains effective for the duration of sun exposure. There is a growing demand for UV filters that are gentle on the skin and do not cause irritation or sensitization. This is particularly important for individuals with sensitive skin or those prone to allergies.

This report studies the global Cosmetic Grade UV Filter production, demand, key manufacturers, and key regions.
