Abstracts

The global Cosmetic Packaging Laminated Tubes market size is expected to reach \$ 2413 million by 2032, rising at a market growth of 5.9% CAGR during the forecast period (2026-2032).

In 2025, global Cosmetic Packaging Laminated Tubes production reached approximately 20 billion units, with an average global market price of around US\$80 per thousand units. Cosmetic Packaging Laminated Tubes refers to the Laminated Tube Packaging for cosmetic use. Laminate tubes are produced from a multilayer laminate foil, either with aluminium or plastic (EVOH) barrier. ABL (Aluminium Barrier Laminate) or PBL (Plastic Barrier Laminate) tubes are a light, hygienic and safe form of packaging that prevents leakage, provides UV protection and can also hold more aggressive products.

Cosmetic Packaging Laminated Tubes refers to flexible multilayer tube packaging used for skincare, haircare, oral care, makeup, sunscreen, cleansing, and other personal care formulations that require attractive appearance, convenient squeezing performance, and reliable protection against oxygen, moisture, light, fragrance loss, and contamination. The market is driven by the expansion of premium beauty and personal care products, the popularity of travel-size and on-the-go packaging, and brand owners' demand for lightweight, printable, and customizable packaging formats. Upstream, the industry depends on plastic resins such as PE, PP, PET and EVOH, aluminum foil for aluminum barrier laminate tubes, printing inks, adhesives, caps, shoulders, nozzles, masterbatches, and tube-making equipment such as extrusion, lamination, printing, heading, capping, and filling machines. In terms of product structure, aluminum barrier laminate tubes offer strong barrier performance against light, oxygen, and moisture, while plastic barrier laminate tubes use plastic-based

barrier layers and provide better decoration flexibility and recyclability potential. Downstream, cosmetic laminated tubes are mainly supplied to cosmetics brands, personal care companies, contract manufacturers, filling plants, retailers, e-commerce brands, hotels, and sample-pack providers, with applications covering facial cleansers, creams, lotions, hand creams, sunscreens, hair conditioners, masks, BB creams, gels, and other semi-solid or viscous formulations. Compared with rigid bottles or jars, laminated tubes are favored because they are lighter, easier to transport, hygienic in dispensing, suitable for high-quality printing, and able to support both mass-market and premium positioning. In the future, the market is expected to evolve toward recyclable mono-material structures, downgauged lightweight tubes, PCR-content materials, bio-based resins, improved barrier films, digital printing, premium tactile finishes, and smaller-batch customized production. Sustainability pressure from regulators, consumers, and beauty brands will accelerate the shift from traditional mixed-material structures toward plastic barrier laminate and recyclable tube designs, especially where product compatibility and shelf-life requirements can still be met. At the same time, growth in natural cosmetics, dermatological skincare, men's grooming, sun care, and e-commerce channels will continue to support demand for durable, leak-resistant, visually differentiated, and cost-efficient laminated tube packaging.
