Abstracts

The global Countercurrent Horizontal Decanter Centrifuge market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The countercurrent horizontal decanter centrifuge is mainly used for solid-liquid separation and separation of tiny particles in the suspension. The main components include a drum, a feed pipe, a discharge pipe, an infusion pump, and a control system. Before using, it is necessary to transport the mixture to be separated into the drum through the feed pipe, and then start the equipment for centrifugal separation. After the centrifugation is completed, the centrifuge will automatically discharge the centrifuged material, which has the characteristics of high separation efficiency, easy operation, compact structure, strong processing capacity, and automatic control.
