According to our (Global Info Research) latest study, the global Counterfeit Money Detectors market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Counterfeit Money Detector is a device which identifies a counterfeit banknote. Banknotes are printed with some security features to reduce counterfeiting. Counterfeit Money Detectors find out whether the required security features are present on the banknote or not. These detectors have various built-in features such as UV detection and watermark detection to check whether the currency is authentic or not. Counterfeit Money Detectors help in increasing profit by reducing loss caused by counterfeit currency.

Governments worldwide are trying to reduce the circulation of fake currency notes. Counterfeiting is considered as a serious crime. To avoid the counterfeiting of currency, detectors are used by banks and other financial institutions as well as public places such as departmental stores and shopping malls where cash transactions are happening. Increasing fraudulent activities regarding the fake currency is driving the counterfeit detectors market. Also, government rules and regulations to prevent the circulation of fake currency notes are increasing the demand for Counterfeit Money Detectors. Moreover, transportation industry is affected largely due to counterfeiting as the number of kiosks and vending machines at railway stations and airports are increasing at a higher rate. However, increasing cost of detectors to include more security features could prove to be a restraining factor for Counterfeit Money Detectors market.
