Abstracts

The global Countertop Soda Dispenser market size is expected to reach \$ 658.6 million by 2029, rising at a market growth of 3.0% CAGR during the forecast period (2023-2029).

The working principle of the Countertop Soda Dispenser is to pour high-pressure carbon dioxide gas into a sealed water bottle, so that more carbon dioxide dissolves in the water, showing a supersaturated state. But when the pressure is reduced, such as by opening a sealed bottle to bring the pressure back to normal atmospheric pressure, the supersaturated carbon dioxide escapes as a gas from the water, so a lot of air bubbles appear in the water.

This report studies the global Countertop Soda Dispenser production, demand, key manufacturers, and key regions.
