The global Countertop Water Filtration System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A countertop water filtration system is a type of point-of-use water filtration system that sits on a kitchen countertop and filters water at the point of use. Countertop water filtration systems usually have a higher filtration capacity than faucet-mounted filters, meaning they can handle larger volumes of water, and may have a longer lifespan between filter replacements. They also often have a higher flow rate, which can make them more suitable for households with larger water needs.
