## Abstracts

The global Counting Relay market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Counting relay is an electrical control device used to count and control the number of signals in a circuit. It can accumulate the number of input signals and trigger the output signal when it reaches the set value to control the circuit. Counting relays usually consist of three parts: counter, relay and counting controller. The counter is used to count the input signal, the relay is used to trigger the output signal, and the counting controller is used to set the counting range and triggering conditions of the counter. Counting relays can also be equipped with display screens, alarms and other ancillary equipment to facilitate users to monitor and manage the counting process.
