The global Coupled Inductor market size is expected to reach \$ 488 million by 2032, rising at a market growth of 1.2% CAGR during the forecast period (2026-2032).

Inductance element can produce collectively effects known as the inductive element, often referred to as direct inductors. Two inductors or coils that are linked by electromagnetic induction are said to be coupled inductors. When an alternating current flows through one coil, the coil sets up a magnetic field which is coupled to the second coil and induces a voltage in that coil. The phenomenon of one inductor inducing a voltage in another inductor is known as mutual inductance. Coupled coils can be used as a basic model for transformers, an important part of power distribution systems and electronic circuits. Transformers are used for changing alternating voltages, currents, and impedances, and to isolate one part of a circuit from another.

From the view of region, USA and Europe are the main consumer because of their advanced industrial basis. But for the next few years, China and other Asia countries will be the fastest growing region because the market is not saturated.
