Abstracts

According to our (Global Info Research) latest study, the global CPE Backsheet market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The structure of the CPE backsheet is based on PET, with a fluororesin film on one side and an EVA film on the other side. Due to the existence of the inner EVA layer of the back sheet, the adhesion between the back sheet and EVA is enhanced, which is beneficial to protect the intermediate cells and the entire photovoltaic module. Its disadvantage is that the more fluorine content of the outermost fluororesin film, the lower the surface tension of the film and the weaker the adhesion with EVA.
