Abstracts

The global CPE Backsheet market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The structure of the CPE backsheet is based on PET, with a fluororesin film on one side and an EVA film on the other side. Due to the existence of the inner EVA layer of the back sheet, the adhesion between the back sheet and EVA is enhanced, which is beneficial to protect the intermediate cells and the entire photovoltaic module. Its disadvantage is that the more fluorine content of the outermost fluororesin film, the lower the surface tension of the film and the weaker the adhesion with EVA.

This report studies the global CPE Backsheet production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for CPE Backsheet, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
