Abstracts

The global CPE-Based Impact Modifiers market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Chlorinated polyethylene or named CPE, made from HDPE by partial chlorination. Due to the presence of chlorine atoms, CPE has softness and certain rubber properties, making it a polar polymer with the same polarity as PVC, increasing the compatibility with PVC. CPE has the function of accelerating the melting and plasticizing of PVC. With the increase of CPE content, the plasticizing time shortens, the plasticizing torque and equilibrium torque increase, and the viscosity of the plasticized melt increases.

This report studies the global CPE-Based Impact Modifiers production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for CPE-Based Impact Modifiers, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
