Abstracts

The global CPO Fiber Arrays market size is expected to reach $ 1926 million by 2032, rising at a market growth of 23.4% CAGR during the forecast period (2026-2032).

In 2025, global CPO Fiber Arrays production reached approximately 2,000 thousand units, with an average global market price of around USD 210 per unit.

The gross profit margin of major companies in the industry was approximately 35%–55%.

In 2025, global production capacity was approximately 2,600 thousand units.

CPO Fiber Arrays are precision multi-fiber optical assemblies used to couple light between co-packaged optical engines, photonic integrated circuits, and external fiber connections. They require accurate fiber spacing, low insertion loss, stable alignment, and reliable packaging. The scope excludes ordinary fiber patch cords, complete optical transceivers, standalone connectors, optical engines, silicon photonic chips, and active optical cables.

The industrial chain includes upstream optical fiber, glass substrates, V-grooves, ferrules, adhesives, lenses, and alignment equipment. Midstream covers fiber preparation, array assembly, polishing, alignment, bonding, optical testing, and packaging. Downstream applications include AI servers, high-speed switches, data centers, high-performance computing, telecommunications equipment, and silicon photonics systems.
