According to our (Global Info Research) latest study, the global CPO Fiber Connector market size was valued at US\$ 191 million in 2025 and is forecast to a readjusted size of US\$ 496 million by 2032 with a CAGR of 14.5% during review period.

In 2025, global CPO Fiber Connector production reached approximately 4.89 million units, with an average global market price of around USD 38 per unit.

The gross profit margin of major companies in the industry is between 30%-45%.

In 2025, the global production capacity of CPO Fiber Connector was approximately 6.40 million units.

CPO Fiber Connector is a high-density optical interconnection component designed for co-packaged optics (CPO) systems, enabling low-loss and high-bandwidth optical signal transmission between optical engines, switches, and computing devices. The connector provides precise optical alignment, mechanical fixation, and reliable signal coupling in compact high-speed data communication architectures. It is mainly used in AI data centers, high-performance computing, optical switches, and next-generation networking infrastructure. The product boundary includes fiber connectors and optical coupling components specifically designed for CPO applications, excluding standalone optical fibers, transceiver modules, and complete CPO systems.

The CPO fiber connector industry chain includes upstream suppliers of optical fibers, ceramic ferrules, precision plastics, metal materials, adhesives, and optical components; the midstream sector covers connector design, precision molding,

polishing, assembly, optical alignment, and reliability testing; the downstream sector includes AI computing clusters, hyperscale data centers, optical network equipment, and advanced communication systems. Market growth is driven by increasing AI computing demand, higher data transmission requirements, and the transition toward optical interconnect architectures.
