Abstracts

According to our (Global Info Research) latest study, the global CPO Switch market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

CPO refers to the photoelectric co-packaging that co-packages the optical engine and the switching chip together. Compared with the traditional solution in which the pluggable optical module is inserted into the front panel of the switch, the CPO solution significantly shortens the distance between the switch chip and the optical engine, which reduces loss, and high-speed electrical signals can be transmitted between the two with high quality. At the same time, the integration level is improved and power consumption can be reduced, the overall advantage is significant
