Abstracts

The global CPO Switch market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

CPO refers to the photoelectric co-packaging that co-packages the optical engine and the switching chip together. Compared with the traditional solution in which the pluggable optical module is inserted into the front panel of the switch, the CPO solution significantly shortens the distance between the switch chip and the optical engine, which reduces loss, and high-speed electrical signals can be transmitted between the two with high quality. At the same time, the integration level is improved and power consumption can be reduced, the overall advantage is significant

This report studies the global CPO Switch production, demand, key manufacturers, and key regions.
