CPT Rigs are specialized vehicles or platforms designed for geotechnical investigations, primarily to assess the subsurface conditions of soils. These rigs are equipped with a cone penetrometer, which is pushed into the ground at a constant rate to measure the resistance of the soil and provide valuable data on its stratigraphy, bearing capacity, and compaction. CPT rigs can be truck-mounted, crawler-mounted, or standalone, and are used in a variety of construction, engineering, and environmental projects to help determine soil properties for foundations, embankments, and other structural applications. The data collected is crucial for making informed decisions about site suitability and design.
